Overview Senior frontend developer with extensive TypeScript and React experience, based in Seattle.

WorkLyft

Frontend Engineer - Open Platform Team

- Lead frontend developer for Lyft's Open Platform initiative, which allows autonomous vehicles to provide rides on Lyft's ridesharing network. To date, we've provided over 30,000 autonomous rides with our partner Aptiv in Las Vegas. This is the world's largest public Autonomous pilot.
- Responsible for building frontend tools to facilitate operational needs of fleet (I.E real time insight into fleet health and performance). These tools enhance research speed, safety and compliance.
- As the lead frontend developer, I am responsible for designing high level architecture, roadmap-ping, developing features, growing the team (hiring and onboarding), and working closely with cross functional partners to deliver a complete solution.
- Additional details covered by NDA.
